\*\* Different Hyundai EVs and PHEVs have different maximum charging rate. If a vehicle's maximum charging rate is below the charger's maximum charging rate, the vehicle will charge at the vehicle's maximum charging rate and not at the charger's maximum charging rate. Hence a vehicle with a 7.2kW max charging rate being charged on a 9.6kW charger will charge at the same speed as if it was being charged by a 7.2kW charger.
